Vitamins to VEGA!

19th. September. 2024

VITAMIN

01

The vitamin B1 market continues to face a tense supply and demand situation, and factory quotations continue to rise. Currently, the factory's quotation for vitamin B1 nitric acid has reached USD30/kg, while the quotation for vitamin B1 hydrochloric acid has risen to USD35/kg.

AMINO ACID

02

For the lysine sulfate market, domestic quotations remain stable. Although some factories offer slightly lower quotations, the overall sulfate transaction volume is not large, and the ex-factory quotation is slightly weak, at around USD650/KG. In the trade market, the enthusiasm for inquiries is not high, and the price remains stable.

API

03

Recently, the amoxicillin market has been affected by the supply and demand relationship, and the factory quotations have risen. Currently, the quotations of mainstream factories are between 32 and 33 US dollars. Although some factories have slightly lower quotations, the feedback from the foreign market is relatively slow. In the future, we will continue to pay attention to the changing trend of amoxicillin prices.

FOOD ADDITIVE

04

Regarding the nutritional supplement product creatine monohydrate, some domestic factories are currently shutting down for maintenance during the summer. Therefore, orders from mainstream factories have been scheduled until November. Currently, the transaction price in the domestic market is around USD5/KG. At this stage, the prices of mainstream manufacturers remain stable, but there is a possibility that the price of creatine monohydrate will increase in the future.
